A HOLLYFRONTIER BUSINESS

A HOLLYFRONTIER BUSINESS

WHO?

Charlotte Pipe, one of the world's leading pipe and plastics manufacturers.

THEIR CHALLENGE:

- Heat transfer systems operating continuously at temperatures of up to 300°C (572°F)
- Heat Transfer Fluid change-outs every 4-6 months with full production line shutdown

“A LOT OF UNNECESSARY PROBLEMS...OXIDIZING, BREAKING DOWN PREMATURELY AND LEAVING A LOT OF SLUDGE BUILD UP IN OIL TANKS AND EXTRUDERS.”

JOB DONE

“When we tested CALFLO™ AF in the same system, we noticed that it didn't have any of these problems. CALFLO AF has a longer fluid life, stands up better to higher temperatures and doesn't create any sludge. With CALFLO AF, we only have to change-out our heat transfer systems once a year.”

Dave Feggstad, Plant Manager.
